- a. <https://www.figma.com/proto/8Ogoioxjrt0J8621KapWWv/Everask?node-id=6%3A40&scaling=scale-down>
- b. We finalized to use this design because we thought it was more intuitive for the users. As it shows the map and pop-up information of the drugstore around the users, the users can directly look for the number of the masks and the distance from the users to the drugstore. According to the user testing, most of the users told us that this design would be better when it is published. They liked the map at the main page, and gave us a nice feedback about searching the drugstore.
- c.
  - We used discord and zoom for the user testing(online). One used discord and three used zoom.
  - From the user testing, we realized that we needed more secondary tasks to accomplish. Users were able to complete the primary tasks very easily, but when they tried to access the tasks in a very different and complex way, they failed to complete them since there were not many buttons working. However, most of them were able to get the goal of our app, which was ordering masks and finding the nearest drugstore. As a result, we will specify better primary tasks and make the way of completing tasks simpler.
- d.
  - Starting page with our logo (Everask)
  - Select a main color for our app
  - Change the design of the navigation tool
- e.
  - "Is there any search bar to search for the drugstore if I know the name of the drugstore? It would be better if there is one." -> Completed adding the search bar to our prototype.
  - "Is the starting point of the map designated to the user's standing position? If not, how about changing it to a default location and add a "My Location" icon, so that the users can search for the other drugstores and come back to their original location on the map." -> Completed adding "My location" icon on the right hand side of the map.
  - "When the navigation icon is clicked, if I still want to look for different drugstore's information as a small pop-up like you have shown here, is there any way to accomplish that?" -> It was impossible to open the other drugstores' pop-up information, but we fixed it so that the users can click different drugstores to see the information while they are being navigated.
